

Why to Properly Manage your Hazardous Material

An ECO Teaching Tool.

Hazardous Material Management

- Hazardous Material (HM) Management procedures are outlined in MCIEAST-MCB CAMLEJO 5090.9 and its enclosure 1.
- Additional guidance for specific HM are outlined in Environmental Standard Operating Procedures (ESOP) listed in enclosure 1 of MCIEAST-MCB Bbul 5090.2.
- Both MCIEAST-MCB CAMLEJOs and ESOPs can be found by going to <http://www.lejeune.marines.mil/OfficesStaff/EnvironmentalMgmt.aspx>
- For questions remember you can always contact:
 - Major Subordinate Command (MSC) ECC
 - Unit ECO
 - Base EMD
- If you don't know ask.

Why Practice Proper HM Management?

- Reduces potential for MCB Camp Lejeune from receiving Notices of Violation (NOV) or Monetary fines from Federal or State agencies.
- Reduces potential for unit Commanders receiving Notices of Environmental Non-Compliance from Commanding General of MCIEAST-MCB Camp Lejeune.
- Reduces likelihood of sky lining a Major Subordinate Command (MSC) or Unit during a HQMC Audit.
- Because it is the right thing to do.

What Happens if HM is not Managed Correctly?

- Potential for harm to the environment, to include:
 - Surface water.
 - Drinking water.
 - Fishing areas.
 - Hunting areas.
- Potential for monetary fines.
- Potential for NJP.
- Potential for additional criminal action in severe cases.

Then there's this.....

Don't end up a Dumpster Diver

- Ask your ECO.
- Ask your Chain of Command.
- Contact EMD.
- If it does not seem right, it probably isn't.

If your Command would like additional assistance, **PLEASE** contact Environmental Management Division.
